## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

*(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.*

2. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen (U.S. Patent No. 5,113,435) in view of Siemens (DE 20104924 U1).

Regarding claims 1-4, 12, 15, 17-19 and 21, Chen discloses an electronic device and its corresponding method such as a portable telephone with a base having a first surface, and with a transparent removable faceplate for covering substantially all of the first surface of the device (see Fig. 3, and col. 2/lines 14-42) and on that transparent faceplate, a design object is included for decoration (fig. 3, item 16). Chen does not disclose to include "replaceable ornamental insert positionable between the removable faceplate and the first surface of the base such that a portion of the ornamental insert is viewable through the substantially transparent section"; however, this technique is taught by Siemens (see Abstract, and Fig. 1, as with the English translation, a plastic cover 4 with exchangeable thin sheet 5 on which designs can be printed for personalizing decorations such as pictures of the user's family, for the portable phone 1). Therefore, it

would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Chen's transparent item for viewing through the numbers of the base of an electronic device with Siemen's technique of using exchangeable inserts for decoration between the base of the electronic device and a transparent plastic cover in order to obtain an easy technique in decorations for an electronic device, with the exchangeable inserts as ornamental inserts (as taught by Siemens), underneath a transparent removable faceplate as taught by Chen as desired.

As for claims 5-6 and 16, these claims are rejected for the same reasons given in the view for applying this technique for an electronic device, wherein the base is a base portion of a computer, as a generalized procedure for applying the decoration inserts underneath the transparent removable faceplate to a portable laptop computer, same as discussed in claims 1-4, 12-15, 17-19 and 21 above.

As for claims 7-8 and 14, these claims are rejected for the same reasons given in the view for applying this technique for an electronic device, wherein the base is a base portion of a digital game player, as a generalized procedure for applying the decoration inserts underneath the transparent removable faceplate to a digital game player, same as discussed in claims 1-4, 12-15, 17-19 and 21 above.

As for claims 9-11, 13 and 20, these claims are rejected for the same reasons given in the view for applying this technique for an electronic device, wherein the electronic device now is a digital audio player, as a generalized procedure for applying the decoration inserts underneath the transparent removable faceplate to a digital audio player, same as discussed in claims 1-4, 12-15, 17-19, and 21 above.
